PD79XIS

Intrinsically Safe Digital Portable Two-Way Radio

- ➤ Most Completely Certified DMR IS Radio
- ➤ ATEX/IECEx/FM/CSA/CQST IIC Certificated
- > Designed for Hazardous Working Environments

Whether on an oil rig, in a coal-mine, gas station or any other potentially explosive environments, safe and reliable communications are on top of everything. Hytera deeply understands the challenges for users in hazardous and harsh environments.

In order to meet these increasing requirements of intrinsically safe and reliable communications, Hytera brings you PD79XIS, the ia explosion-proof DMR radio.

PD79XISDESIGNED FOR THE MISSION

Hytera PD79XIS Intrinsically Safe Digital Portable Two-Way Radio Designed to comply with the highest grade "ia"

PD79XIS works in the places which contain various long-standing explosive mixed gases, even coal mine methane. Such places include but not limited to coal mine, gas stations, oil platforms, chemical plants, flour mills, airport and other inflammable or explosive conditions.

The working environment of the oil & gas industries often contains flammable and explosive gas and liquid, which makes the workers at risk. Therefore, reliable and high explosion-proof radio is required.

Mining industry
environment is very
complex. It always contains
various long-standing
explosive gases and dusts.
Especially the methane in
coal mine makes the
environment very
hazardous. Therefore, good
and safe communications
are in urgent need. Hytera
PD79XIS ia explosion-proof
radio can satisfy all your
demands.

A fire accident produces smokes, dusts, and even explosive and toxic gases, which bring high risks for communications of fire rescue. Hytera ATEX radios can provide effective and safe communication services to the firefighters.

Airports are complex facilities where effective and reliable communications are of great importance. And there is a risk of explosion because of the potential exposure to fuel. Hytera ATEX radios are used in areas where workers and on-site fire crews are in close proximity to aviation fuel to keep them safe.

Flammable gases, liquids and solids are converted and processed in many different processes in the chemical industry. These processes may give rise to explosive mixtures.

safety, which means the circuit has three protective measures. An "ia" radio be used in zone 0/1/2 areas, allowing for the occurrence of two

WORK SAFER

ia Protection Classification

The radio with battery is designed to comply with the highest grade "ia". It can work in the places which contain various long-standing explosive mixed gases and dusts, and has passed ATEX, FM, and IECEx certification.

Innovative Silicone Encapsulation Technology

Silicone encapsulation technology prevents the internal circuits from interface with air and liquid, which effectively stops the intrusion of liquid, inflammable dust and explosive gas.

Innovative Antistatic Design

PD79XIS adopts antistatic materials and patent design to reduce electrostatic discharge.

Structure Design of Screw Internal Trapping

The screw of the belt clip is designed as internal trapping. It ensures no contact between the metal and the ground in case of drop, and avoids discharge.

Strict PCB Design and High EMC Performance

To achieve a higher explosion-proof safety level, Hytera PD79XIS adopts optimal PCB layout design. All the key components of PCB are covered with shield, which minimizes circuit fault and features better EMC performance.

Light Metal Design

PD79XIS shell is made of light metal to ensure no mechanical spark; it can effectively maximize the reliability in explosive environments.

Patented Battery Latch Design

To disengage the battery from the radio, you need to move the lock and bolt of the latch along two different axes. Such patented design locks the battery in case of dropping which might cause a spark.

Screen

The PD79XIS screen is made of tough and crack-proof material.

WORK, PROTECT & ENABLE V//////////

GNSS Positioning

The built-in GNSS module supports GPS, GLONASS, and Beidou (*GLONASS and Beidou supported on R8.5).

n Constant

one Worker

The radio automatically triggers the emergency feature if there is no operation on the radio during the preset time.

Maii Dowii

The radio automatically alerts other team members if it tilts over the specified gradient and is not placed upright within the time, or stays motionless within the specified gradient.

(†)

nnovative Ergonomic Design

Separated by the antenna, channel knob and volume knob stand apart from each other. They are designed in different sizes to enhance the operation accuracy, which greatly reduces accidental operation with gloves or in dark environments. Compact and large textured keys provide an excellent tactile feeling.

Friendly User Interfac

Hytera PD79XIS has a 1.8 inch and 65536 color LCD screen, which clearly displays under bright sunlight.

Up to 20 programmable keys are flexibly configurable for quick access through one-button operations.

Lona Cvcle Life

Hytera PD79XIS provides large capacity Li-ion battery, which can last more than 20 hours under 5-5-90 duty cycle. The overcharge and over-discharge design protects the battery against instability caused by overheating. In addition, the battery cells are also encapsulated to redistribute single point heat buildup and prevent air discharge as well.

Standard

Strap

IOP

The radio can access to DMR network quickly and supports roaming for safe and efficient communication. It also provides powerful interoperability with base stations and radios of different manufacturers.

Rugged and Reliable

The radio complies with MILSTD-810 C/D/E/F/G and IP67 dust & water protection, which ensures the best performances even in the toughest conditions.

Skid-proof Design

The rear part and both sides of the radio are in skid-proof design to prevent dropping and ensure easy grab.

MIL-STD

810G

IP67

The radio has a globally patented industrial design with antenna in the middle. The antenna is short and build-in with GPS. Such omnidirectional antenna pattern ensures better coverage.

Optional

Programming Cable (USB Port)

Anti-explosion adjustable earhook

MCU 6-unit charger MCA08

Dual pocket MCU charger CH10A06

SPECIFICATIONS

CENEDAL		
GENERAL Frequency Range	UHF:1 400-470 MHz; VHF: 136-174 MHz	
Channel Capacity	1024	
Zone Capacity	64 (each with a maximum of 16 channels)	
Channel Spacing	12.5 kHz / 20 kHz / 25 kHz	
Operating Voltage	7.4V (rated)	
Battery	1800 mAh (Li-lon)	
Battery Life (5-5-90 Duty Cycle, High TX Power) High-capacity 1800 mAh Li-lon Battery	Analog: about 14.5 H / 13 H (GPS) Digital: about 17 H / 15 H (GPS)
